Cinema Management System ER DIAGRAM

Asaad Abbasi | May 12, 2021

The client has no username but the phone number is the username
The records of the client table are recorded by the phone number of the client
When we basically Book a ticket what we do is some steps
1. **We check for the exisiting phone number with the name in the clients table**
2. **If the name does not exist we create a new client**
3. **We get the clientID and we move on with the rest of the stuff**
